INVENTOR : NAGANO TOSHIHIKO;

INT.CL. : H04R 1/10

TITLE : EARPHONE HOLDER

ABSTRACT : PROBLEM TO BE SOLVED: To provide an earphone holder, with which the wire of a long earphone can be used just for the required length and the earphone can be easily put in order, by attaching a magnet to a main body provided with a section for holding the wire of the earphone and a section for holding the earphone.

SOLUTION: A magnet 3 is attached to the main body provided with an earphone wire holder 1 and an earphone holder 2. The earphone wire holder is used for putting an excess wire from a television to a user's own ear in order and putting the earphone in order by side of a television case when the earphone is not used. Besides, the earphone holder 2 can easily house the earphone when the earphone is not used. The magnet 3 is used for attaching the holder on the television case or the section of iron of a bed, etc. Thus, the wire can be easily processed without altering a conventional earphone and the earphone can be efficiently used.
